OBJECTIVE

To continuously build upon my current skill set while also adopting new technologies and methodologies to build quality web and mobile applications.

SKILLS

- C#, JavaScript, SQL
- .NET Core, NodeJS, Serverless
- VueJS, Angular, HTML/CSS
- DDD, TDD

INTERESTS

- Microservices Architecture, Domain Driven Design, Functional and Reactive Programming

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Allrecipes.com / Meredith

Seattle, WA — January 2016 - Present

I am part of a team working on greenfield projects that are focused on delivering native advertising to all of Meredith's digital properties. Collaborating with my team I helped architect and build a native advertising platform from the campaign management front-end to the ad delivery service. The system was designed using domain driven design methodologies with a heavy focus on microservices architecture and cloud first. The services were built using a combination of NodeJS and .NET Core and all using a CI deployment strategy.

Senior Solutions Consultant, Rightpoint Consulting

Chicago, IL — September 2012 - December 2015

Depending on the project I leverage tools from my skill set to build custom applications for a wide range of clients and deliver them on-time and on-budget. Usually I would also need to learn a new framework or technology in the process to complete the project. Projects have included:

- A SPA written using JavaScript and Angular. Bower, Grunt and Yeoman were also used to aid in development.
- An Android app built using Xamarin and Xamarin.Forms that handled real-time actions between users by consuming SignalR messages.

I am also the founder of "Rightpoint Labs" which is a club for tech and non-tech employees to collaborate on fun, open source projects while helping them to learn new skills and technologies. Projects have included:

- Pourcast - A real time application used to monitor the levels of beer in the keg. ASP.NET MVC, C#, MongoDB, JavaScript, SignalR and an Arduino were used to build it.

Software Developer, Green 7 Capital Management

Chicago, IL — March 2012 - July 2012

Developed multi-threaded equity options trading applications using the latest techniques in C#, WinForms and SQL Server 2008 R2. Participated in in-person/conference call meetings with managers, partners and traders. Collaborated with team members to ensure consistency among design.

Designed, developed, tested and supported programs throughout the entire application life cycle. Utilized FIX Protocol in applications used for position management. Designed and implemented the MS SQL database.

Web and Software Developer, Scalp Trade

Chicago, IL — Dec 2010 - March 2012

Gathered requirements from managers and traders to develop a customized intranet website that allowed them to manage their accounts more effectively. Created tools in C# that were used to scrape websites for information that would help make quick decision trades.
